

SINAM Electronic Docflow & Archiving Solution

SESDA

- To work centralized with several organizations
- To create a multi-level organizational structures with varying complexity
- To hold a discussion ("chat" function) between participants during correspondence
- Voice messages record in the system and voice record within the "chat" function
- It has an opportunity to change the location of objects in the virtual office using the drag & drop technique
- Allocation of a content in any format (including media files)
- Feasible to receive applications in e-format
- Performing group operations
- Returning tasks
- Cancellation of possible operations within the process
- Creating a document within the system (adding templates)
- Monitoring results in the process of preparing documents
- Ability to respond with one document per group of requests
- Transparent document's life cycle
- Contextual search - the relevant document can be found by any word in the document
- Verify the authenticity of the signature using a QR code

Background

Documents are one of the fundamental building blocks of civilization. For millennia, they have allowed societies to share ideas and information at different distances over time. They have also provided the records needed to adopt the laws and policies.

Thus, controlling, managing, tracking and securing documents has become more challenging in an era when they can be copied and distributed across global networks in a matter of seconds. Tracking documents, checking their relevance and authenticity, assuring an unauthorized access by the third parties, as well as speeding up their creation, modification, approval and distribution is a significant problem for almost all of us.

Going Paperless

A paperless office looks like this: it is a workplace in which you have limited or even eliminated the use of paper. This means your documents will be digital and this can bring many benefits to your workflow. It can save money and time for your business, increase productivity, save workspace, facilitate documentation process and information sharing, improve the security of information storage, and help to create an environment-friendly office.

Being professionals in creating the systems which are necessary for developing e-government, we offer a centralized electronic document management system SESDA, designed to work on documents and implement responses to requests, as within framework of one enterprise and correspondence with other enterprises in the system.

As developers of the most demandful software, we often advise businesses and government agencies to move towards a paperless office. They understand the benefits of this novelty but do not always know - how to get there. Therefore, the question we are often asked is how do we get started and how do we develop a business plan? This is the purpose of this document. This will give you a clear outline of the issues and areas that you need to address when moving to the paperless workflow.

SESDA is the Right choice

SESDA (SINAM Electronic Document Management and Archive) is an electronic document management system aimed at ensuring centralized work within an organization and between organizations. The proposed document management system is based on modern technologies.

SESDA provides development, management and tracking of all correspondence using any type of content. The system allows you to receive data in electronic form from any source and process the data within the company.

The administration, configuration and integration operations with other corporate systems are simple and fast. The system consists of a number of programs that allows you to collect any combination from the document workflow scheme.

System solutions and operational capabilities ensure the operation of a single system in companies with organizational structures of varying complexity. The work of departments and branches in the system of a single territorial and distribution network is also supported.

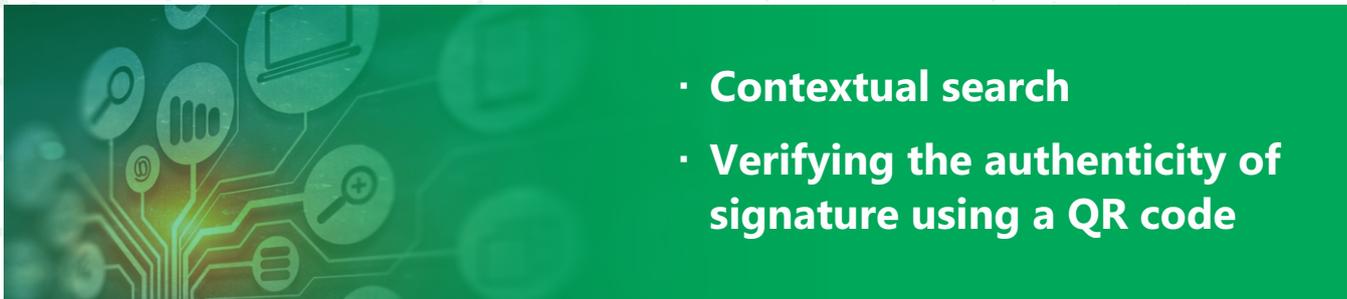

**organizations and a large
number of users with
the ability to connect
simultaneously**

Flexible system with Rich functionality

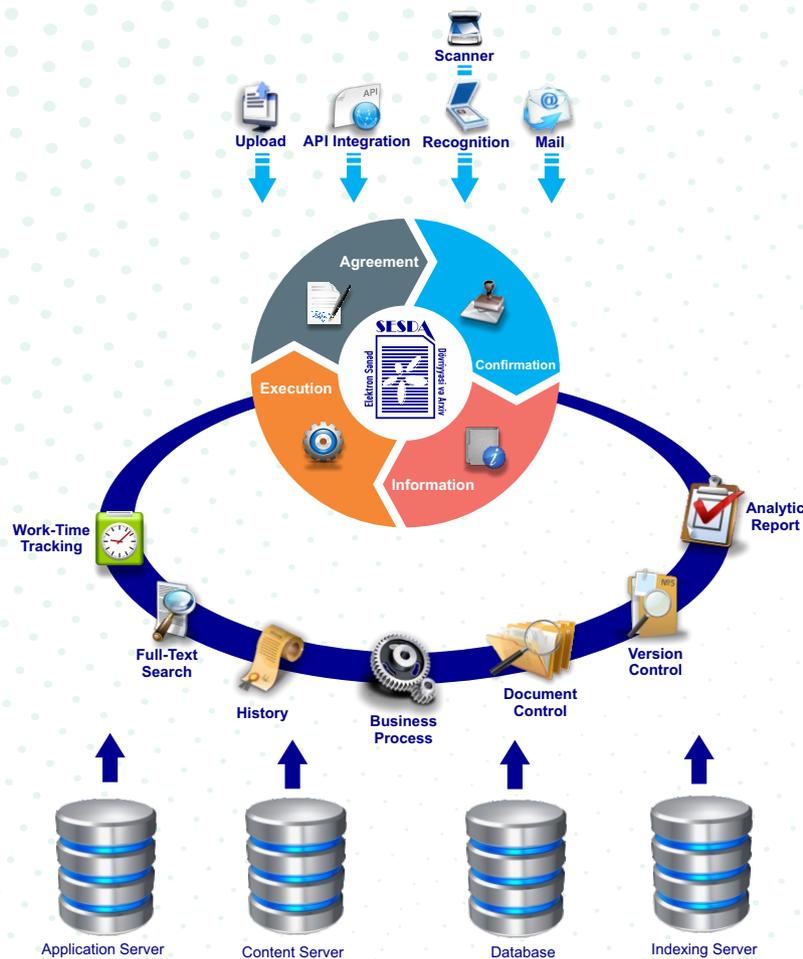

The system covers all the possibilities associated with the organization of a unified electronic document workflow:

- Document versioning
- Registration of documents from common sources (paper, email, embedded system, portal, etc.)
- E-signature and QR code verification
- E-approval of documents
- Redirecting to employees, paperwork, information flow, contracts, signatures, extension of the deadline, change of the main contractor, etc.
- Full procedure for the circulation of documents, notification of operations performed by other participants on assignment
- Granting rights to the user for operations and tasks
- Multi-step procedure before approval (possibility of sequential, parallel processes)
- Controlling documents and tasks submission
- Writing a regular and analytical reports
- Search by any attributes
- Contextual search based on predefined and indexed data
- SW integration with video conferencing

- 
- **Contextual search**
 - **Verifying the authenticity of signature using a QR code**

Platform Advantages

The system ensures implementation of the most sophisticated requirements of clients (for example, storage of billions of objects and hundreds of terabyte of data), allows effective management of large amount of materials, and easily supports simultaneous work of great amount of users. The system uses security measures, including digitalization of content, control over access, digital liquidation of data. Technologies conform to all standard requirements, necessary to ensure protection of information.

- LDAP integration
- Version control – Addition of new and storage of old versions
- Permission set – Capability to delegate the right for one or another document in the course of processes
- Instead of SQL, use ofDQL Security enforcement – During the selection of data, only those data, for whom a certain user has an access, are displayed
- Content Conversion Services - Conversion format of All Kinds of Documents
- EMAIL, Web Service (possibility of integration via mapping)

SESDA provided Opportunities

The screenshot displays the EGOV Administrator interface. The top navigation bar includes the EGOV logo and the text 'ADMINISTRATORUN İŞ YERİ'. The main content area is titled 'İSTİFADACILAR' and contains several sections:

- Parametrlar**: A list of parameters with toggle switches, including 'Qəbuletma icazaları' (e.g., Təsdiq, Elektron imza, Razılaşdırma) and 'Göndərilmə icazaları' (e.g., Təsdiq, Razılaşdırma, İcra).
- Menyular**: A list of menu items with expandable arrows, such as 'Analitika', 'Daxil olanlar', 'Hesabat', 'İş növbələri', 'Nəzarət', 'Nömrələnmə', 'Qovluğum', 'Statistika', 'Xaric olanlar', 'Yeni həvalə', and 'Yeni yazışma'.
- Qruplar**: A list of groups with checkmarks, including 'Banklar', 'Rəhbərlik', 'Əməkləşlər', 'SESDA', 'Sesda Programistlər', 'Maliyyə', 'Kətiblik', 'Analytics', 'Yeni Qrupumuz', and 'Front komandası'.
- Göndərilmə strukturları**: A section for document flow structures, showing a list of categories (Təsdiq, Razılaşdırma, İcra, Məlumat, Dərkənar, Həvalə) and a sub-item 'Sınam MMC'.

The interface is clean and modern, with a green and white color scheme. A 'DÜZƏLT' button is visible in the bottom right corner.

- Upon login, the paper version is completely digitized, and as a result, this file can be found by any word in the document.
- Possibility to write 1 answer to several documents
- Operations with a set of tasks
- Cancellation of tasks
- Cancellation of operations
- Possibility to invalidate rejected documents
- Possibility to perform operations on one task by several performers (main and co-performers)
- Preliminary definition of the document's path
- Admin functionality for each user organization
- Ability to manage privileges for all organizations and users from administrator's spot
- Discussion between participants ("chat" function) and the ability to record voice during correspondence
- Ability to change the location of virtual office objects using drag & drop technique
- Ability to create and edit documents directly in the system
- Possibility of numbering documents with different indices depending on the type
- Export and print search results in Excel
- Ability to prepare analytical reports in any form
- Ability to send SESDA notifications to email and systems during each transaction.

Transparent document Life cycle

The whole information on the history of current correspondence is reflected in the history part of correspondence. Here you can see the date and time of all the transactions carried out in the document. You can see the performers and statuses at every stage.

There's no question that going paperless can be a timesaving, resource-saving move for businesses and government organizations of all sizes. There's also no question that it can be a laborious undertaking.

SESDA has helped public organizations such as Central Bank of Azerbaijan Republic, National Archive of Azerbaijan to achieve their goals to automate business processes and become a paperless office environment.
